 **Getting spammed? You have protection.**  
Spammers target everything; your contact forms aren't an exception. Before you get spammed, protect your contact forms with the powerful anti-spam features Contact Form 7 provides.  
Contact Form 7 supports spam-filtering with [Akismet](#). Intelligent [reCAPTCHA](#) blocks annoying spambots. Plus, using [comment blacklist](#), you can block messages containing specified keywords or those sent from specified IP addresses.

 **Before you cry over split mail...**  
Contact Form 7 doesn't store submitted messages anywhere. Therefore, you may lose important messages forever if your mail server has issues or you make a mistake in mail configuration.  
Install a message storage plugin before this happens to you. [Flamingo](#) saves all messages through contact forms into the database. Flamingo is a free WordPress plugin created by the same author as Contact Form 7.

WordPress offers you the ability to create a custom URL structure for your permalinks and archives. Custom URL structures can improve the aesthetics, usability, and forward-compatibility of your links. A [number of tags are available](#), and here are some examples to get you started.

**Common Settings**

Plain <http://localhost/wp2/?p=123>

Month and name <http://localhost/wp2/2019/12/sample-post/>

Day and name <http://localhost/wp2/2019/12/11/sample-post/>

Month and name <http://localhost/wp2/2019/12/sample-post/>

Numeric <http://localhost/wp2/archives/123>

Post name <http://localhost/wp2/sample-post/>

Available tags:

**Optional**

If you like, you may enter custom structures for your category and tag URLs here. For example, using `topics` as your category base would make your category links like <http://localhost/wp2/topics/uncategorized/>. If you leave these blank the defaults will be used.
